P2- Grading Rubric

	Complete	partially complete	incomplete
Writing SQL DB Schema (createtbl.sql, createtbl.log, droptbl.sql, and droptbl.log) 18%	18% • All required files are submitted with complete data for all defined/ dropped tables. • Foreign key references are well defined in SQL DB schema. • One or more of sensible pending constraints are listed in project2.pdf	9% • Some of the required files are submitted with proper data or all files are submitted but some of them are missing some data. • Some foreign key references are well defined in SQL DB schema. • Some of the listed pending constraints in project2.pdf are not sensible.	1% • Almost no files are submitted or submitted with many misisng data. • Little or no foreign key references are defined. • No pending constraints are listed in project2.pdf document.
Load data **16%**	**16%** • Both loaddata.sql and loaddata.log are submitted with complete data for insert SQL statements • Respect the range of tuples restrictions for all tables (min. 5 records and maximum 500 records per table)	**8%** • loaddata.sql or loaddata.log are missing or submitted with partially complete data • Respect the range of tuples restrictions for most of the tables (min. 5 records and maximum 500 records per table)	**0%** • loaddata.sql and loaddata.log are missing or submitted with almost many missing data • Doesn't respect the range of tuples restrictions for most of the tables (min. 5 records and maximum 500 records per table)
SQL DML queries (Q5 & Q6)	Seven queries each query worth 4% and graded as follows: • -1.5 points for each missing part of the required information (plain text, query, screenshot with output), with a maximum of -4 points if everything is missing or the query has errors (didn't execute).		

28%	• -2 points for trivial queries:
	  ○ For select queries: 2 or less tables, only an aggregation but no group by, no WITH, no subqueries, no set in combination with a join, etc.).
	  ○ For modification queries: If the modification is not complex (updating/deleting/inserting a single tuple or deleting all tuples)
	• - (1-3) for query incorrectness (erroneous logic)		

Views (Q7) **12%**	Two views each worth 6% and graded as follows: • -3 points if the view definition itself is incorrect with respect to DB schema. • -2 points for incorrect logic for select and/or insert statements. • -1 point for each missing screenshot required ((b) – (e) in Q(7)) • -1 points if some sensible explanation for insertion result is missing. (e.g., the database does not allow insert into complex views that have join conditions on the view definition)		
CHECK constraints (Q8) **6%**	Two Check constraints each worth 3% and graded as follows: • -1 points for each missing part of the required information (constraint description, statement, screenshot of running the constraint and screenshot of insertion command violating the constraint), with a maximum of -3 points if everything is missing or the query has errors (didn't execute). • -1.5 for incorrectness (erroneous logic).		
Creativity (Q9) **10%**	10% • Provided a sensible and complete information about the real data set they used, or analytical queries or new SQL feature, including description, SQL statements and screenshot of the output.	5% • Provided reasonable SQL analytical task, real data set or SQL feature with partially complete information (some of the required information is not submitted (-2 for each missing information with maximum of -5 points if the presented information are not complete or incorrect)	0% • No reasonable SQL analytical task, real dataset, or SQL feature is provided, or they are provided superficially, with almost all required information missing.
Presentation **10%**	10% • The presentation is clear, well-structured and at the right level to provide the overall query design and objectives, then focuses on selected queries that are particularly important or interesting (e.g., due to complexity, use of joins, subqueries, etc.)	5% • A good presentation, but some aspects are not clear, or miss explaining key parts of presented SQL queries, or it may focus too much on low-level details that are not essential for a 10-minute presentation.	0% • The presentation is scattered and/or incomplete and/or difficult to follow.
Others (Q1, Q2 and Q 10)	Marks deducted as described in P2 document from the total achieved score for the following: • -20 points for not using DB2 on DB server (winter2026-comp421.cs.mcgill.ca server) • -5 points for not submitting the DB relational schema with changes if required according to P1 feedback • -10 points for not including information about the group work organization.		

Important Notes

- Note that each team member might get a different grade (based on the presentation and Q&A question). We expect each team member to also understand the part of the project done by the other team members.
- 10 points for 1-day late submission (i.e., March 12th noon) and - 20 points for 2 days late submission (i.e., March 13th noon).
